I.

B.Tech (Food.Engg) 2013 Admission IVth Semester Final Examination-June/ July -2015

Cat. No: Fden.2207	Marks:50 Time:2 hours
Title: Unit operations in Food Engineering (2+1)	. 4
	$(10 \times 1 = 10)$
Fill in the blanks:	
I. A point where solid, liquid and vapour phase of a sub	, starroo ontot to
2. One hundred kg of grain is dried from 18% to 13% (wb)	. The amount of water
removed is 3. Dimensions of power are	_ :
the forest concur removed in an evabulation	is called
c A for alphale of Aum diameter move upwards at a velo	city of the
the angular velo	City in radio
7. The requirement of a homogenizer operating at	220 041 11011108
c damento of 10000 litres/h is roughly -	
	·
9. Tumbling mixers should be rotated at speeds to a speed	erial in closed duct by
	Section of the second section of the section of the second section of the s
10. Direct electrical heating of food mixtures is achieved by	heating.
10. Difect electrical fleating	
Write short notes/answers on ANY Five:	$(5 \times 2 = 10)$
The state of Content	
2. Hulling efficiency	
3 Screw press4 Bucket elevator	
·	
4. 5 Agitators	
6. Nucleation	• ,
7. Nanofiltration	
I. Write short essays on ANY Five of the following:	$(5 \times 4 = 20)$
1. Write short essays on ANY Five of the following 1. Methods to determine moisture content in food	
2. Rittinger's and Kick's Laws	
3. Ball mills	
4. Parboiling of paddy	
5. Multi effect evaporators	
6. Packed tower design	
7 Flash distillation	

IV. Write essay on ANY ONE:

 $(1 \times 10 = 10)$

- 1. Grape juice at a rate of 3 kg/s is concentrated in a single effect evaporator from 18% to 23% solids content. Calculate a) the product flow rate, b) the evaporation rate, c) the steam consumption, d) the steam economy, and e) the required heat transfer area of the evaporator if the juice enters the evaporator at 50°C, the juice boils in the evaporator at 50°C, saturated steam at 100°C is used as heating medium, the condensate exits at 100°C, the heat capacity of the juice is 3.7 kJ/kg°C and 3.6 kJ/kg°C at the inlet and the outlet of the evaporator respectively, and the overall heat transfer coefficient is 1500 W/m²°C.
- 2. A cyclone separator having the following specifications is used to collect particles of specific gravity 1.2.

Cyclone diameter = 180 cm

Air inlet diameter = 30 cm

Separating height = 2.5 of dia. Of inlet

Helix pitch = 15°

Inlet width = 10 cm

Entry particle velocity = 15 m/s

Compute the smallest particle which can be collected. Estimate the pressure drop through the unit.
